“Regional E-Government in Multilevel Governance Systems: Trends and Convergence across Italian Regional Administrations” – Supplementary material.

Anna Di Palma, Gregorio Buzzelli, Stefano Sacchi – *Rivista Italiana di Politiche Pubbliche/Italian Journal of Public Policy*, n.3/2026.

Figure X1. *Beta* convergence of ‘Services to citizens’ dimension. OLS regression equation. Coefficient=-0,31.

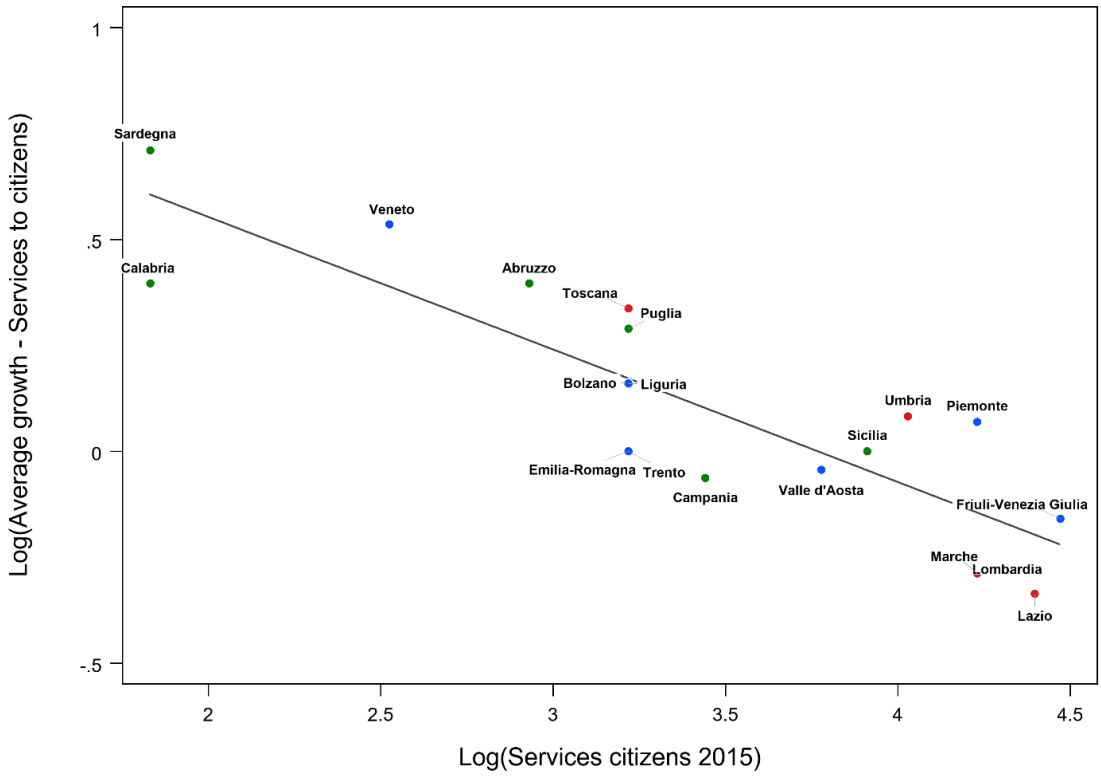

Figure X2. *Beta* convergence of 'Services to businesses' dimension. OLS regression equation. Coefficient=-0,32.

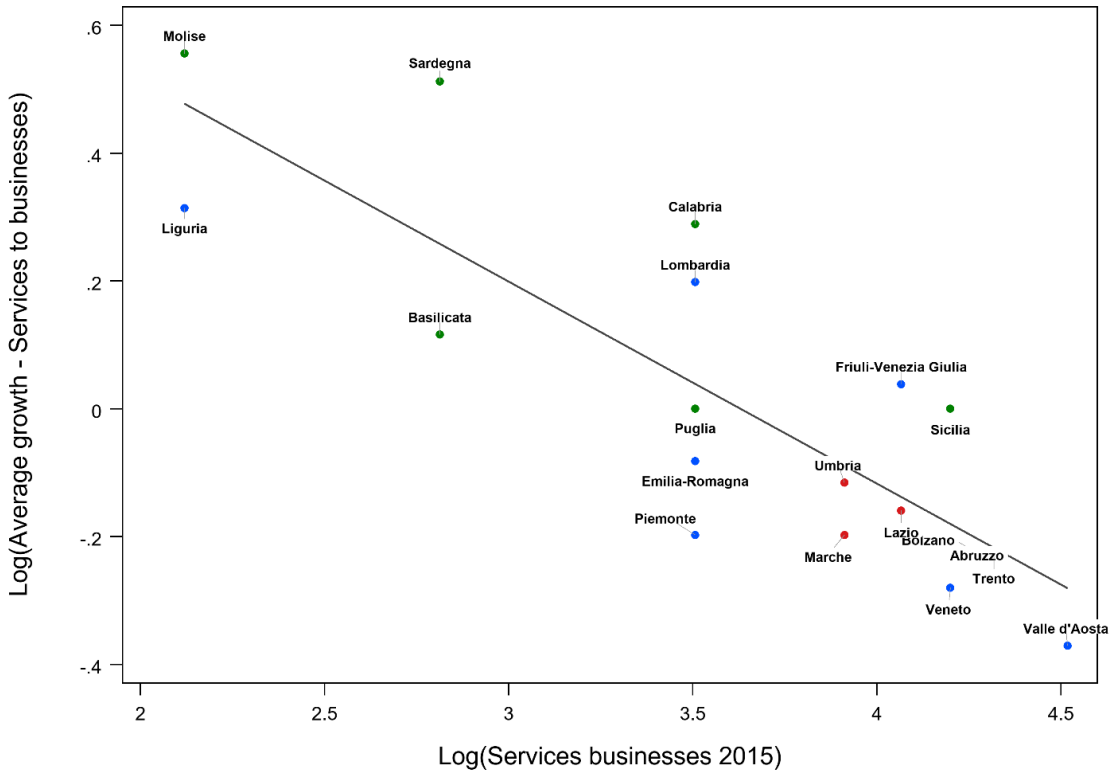

Figure X3. *Beta* convergence of 'E-government users' dimension. OLS regression equation. Coefficient=-0,08.

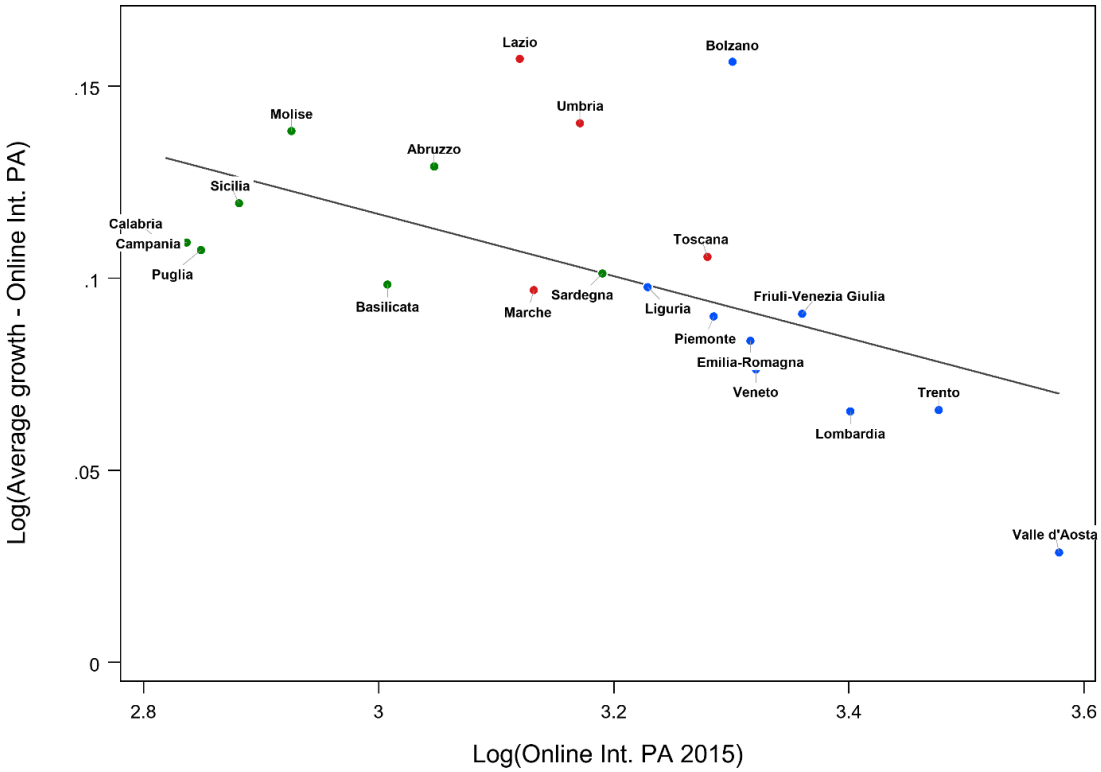

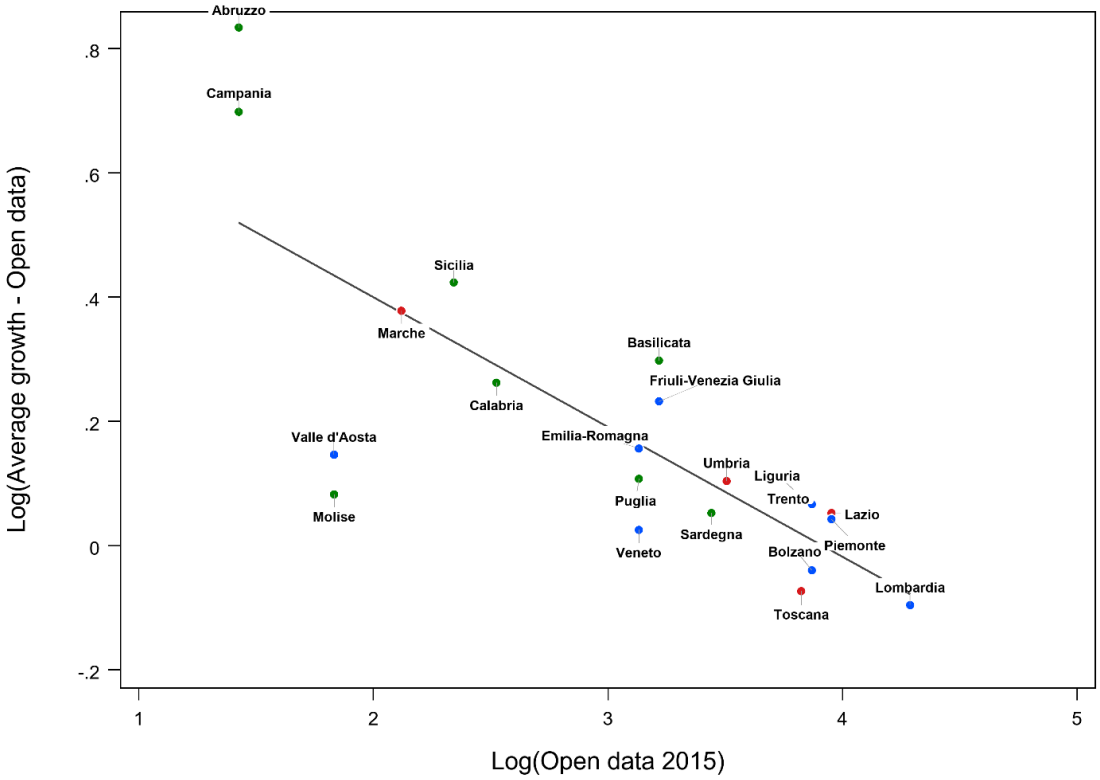

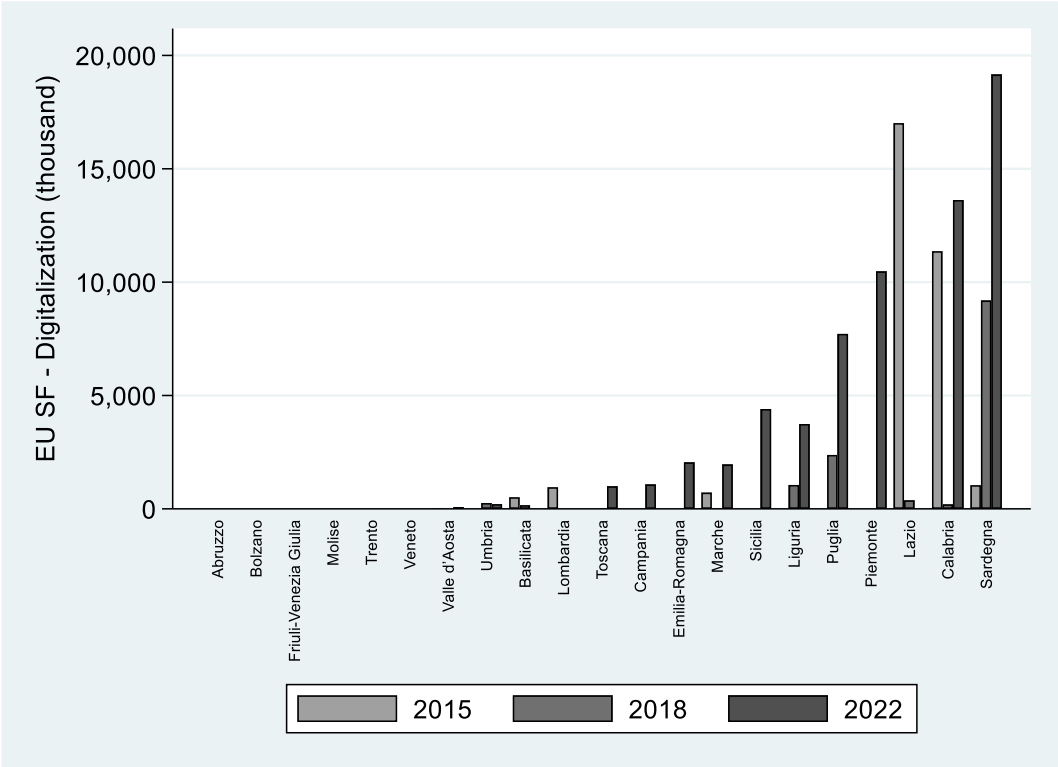

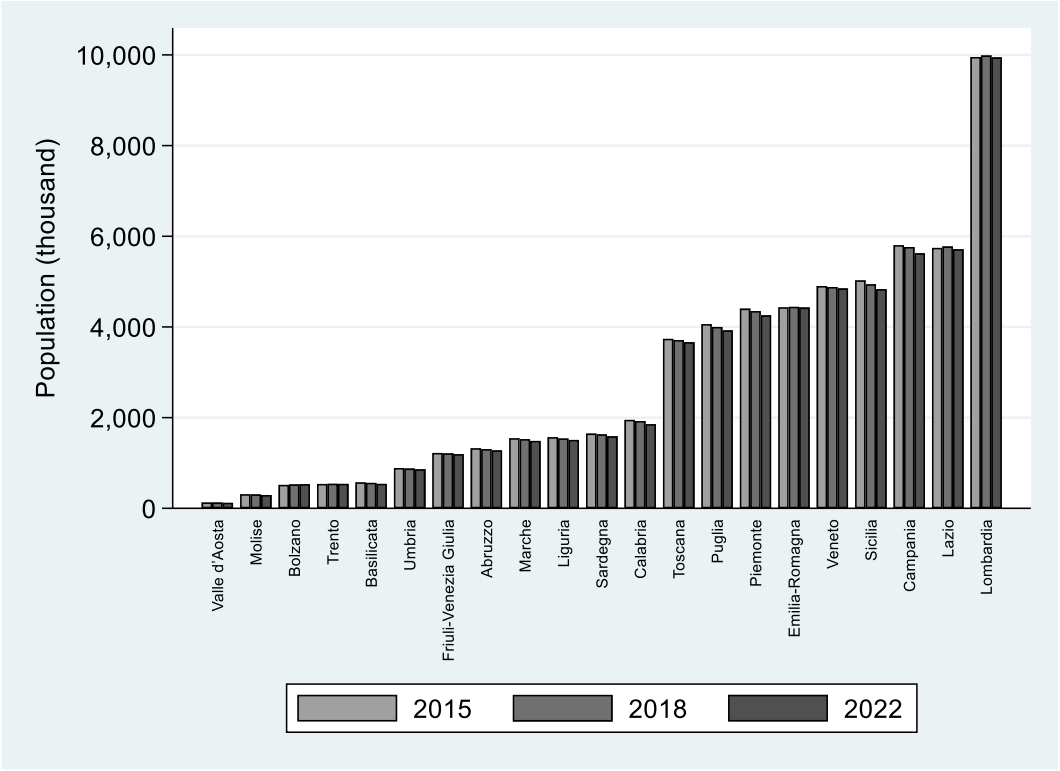

Figure X4. *Beta* convergence of 'Open data' dimension. OLS regression equation. Coefficient=-0,21.

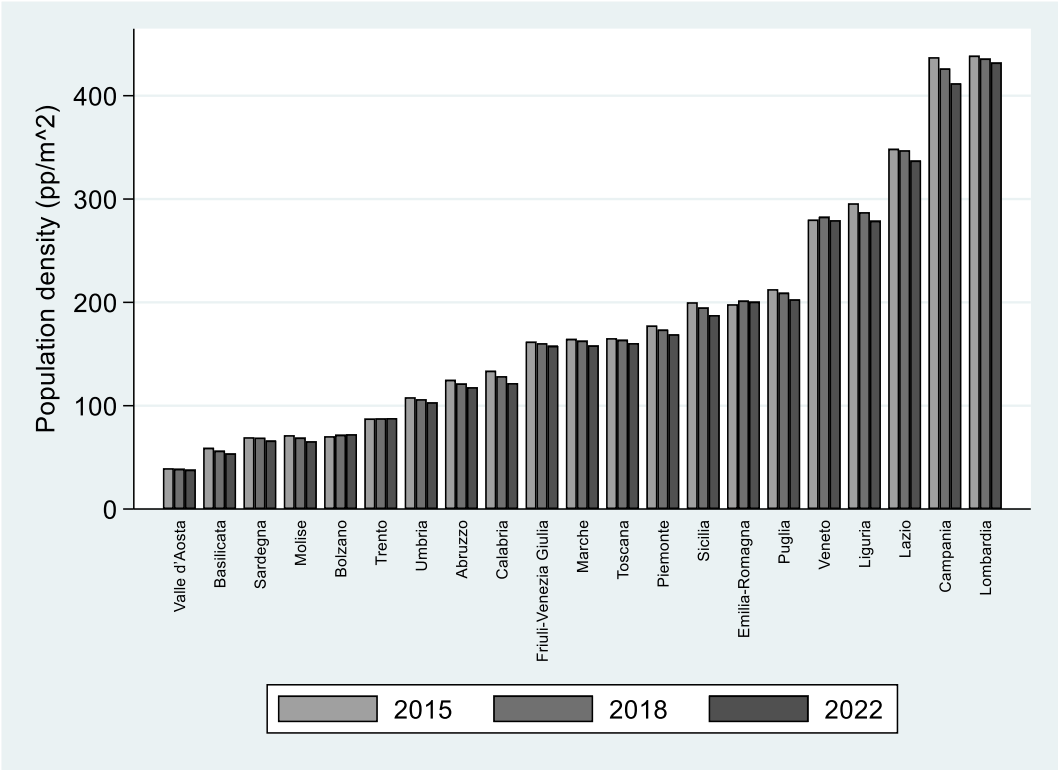

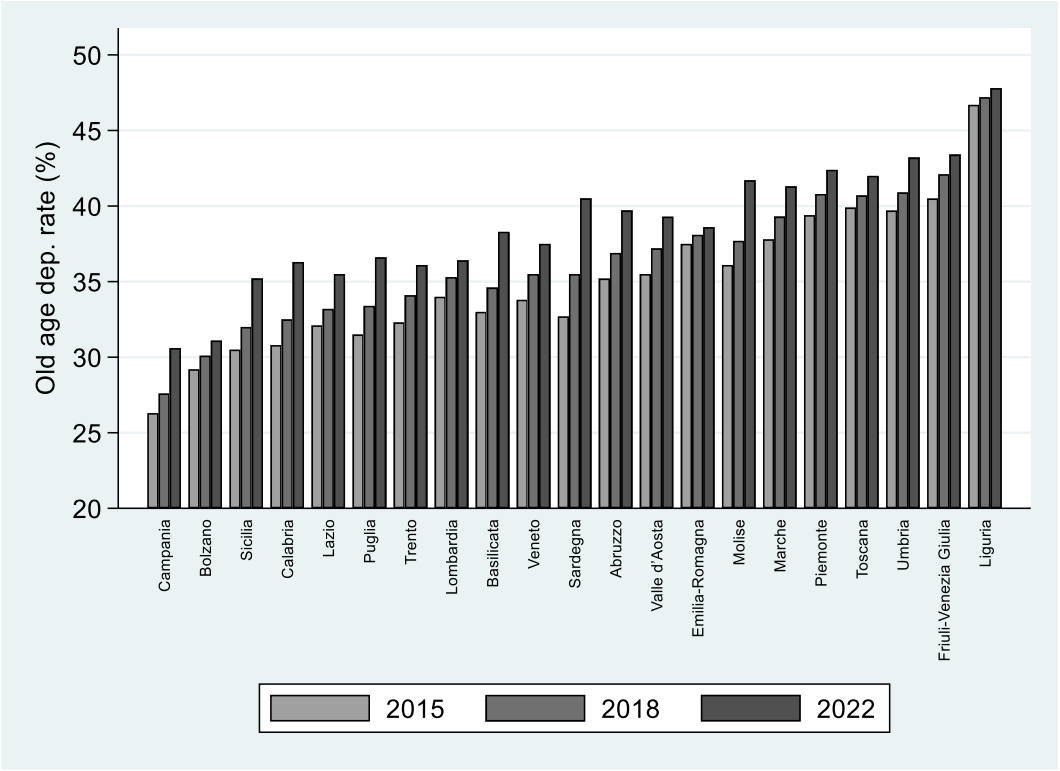

Figures X5-11: Descriptive statistics of the selected covariates (Source: Istat).

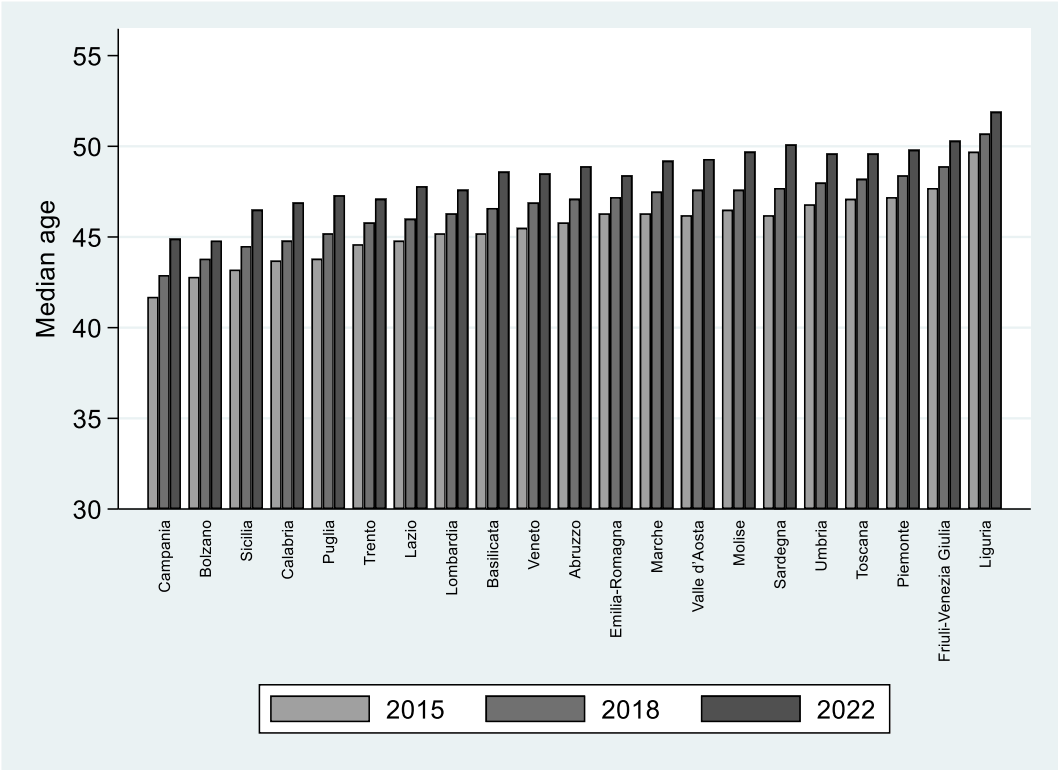

Descriptive evidence shows that Sardegna, Calabria, Lazio and Piemonte are among the regions receiving the highest volumes of EU Structural Funds. While Southern regions tend to receive larger allocations, some Central and Northern regions - most notably Lazio, Piemonte and Liguria - also obtain considerable resources. By contrast, indicators such as level of education, and GDP per capita display higher values in Northern regions. Population density, territorial size and age structure do not exhibit a clear geographical distributional pattern.
